International Network •

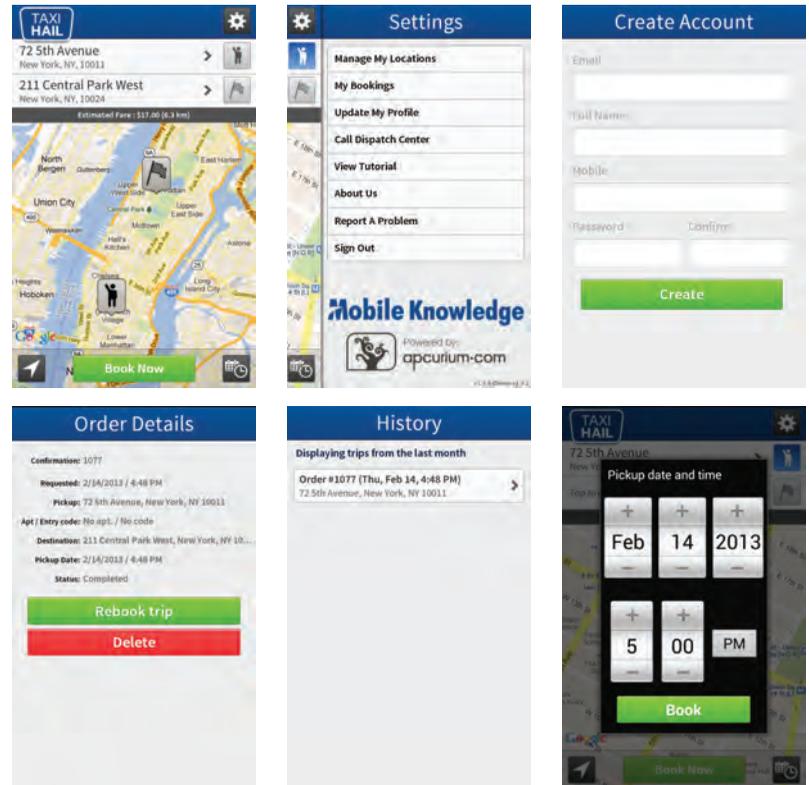

# Included Features

## Smartphone Booking App

TaxiHail is a logical extension to your Mobile Knowledge dispatch system. TaxiHail allows passengers to book and manage their own reservations, via iOS or android, in real-time, alleviating call congestion during peak busy hours. An app you can count on from the company you already trust for your dispatch requirements.

Mobile Knowledge will custom brand the app using your logo and colors.

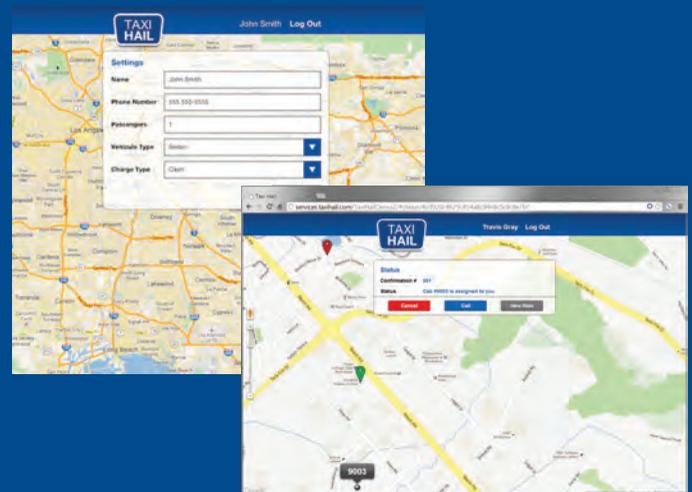

Your customers simply download the app, create an account and book a ride.

## TaxiHail Web Booking

Your customers have the option of booking from their desktop then watching the progress of the order via the app on their smartphone.

Compatible with all major browsers, your customers can book a ride from anywhere 24 / 7 / 365.

## TaxiHail International Network

With the purchase of the TaxiHail Smartphone Booking App you automatically have access to an International network of TaxiHail app users. TaxiHail Network allows travelling users to book trips on another TaxiHail company's system. For example, if an Atlanta TaxiHail user travels to Chicago the user can book with a local company who has also subscribed to TaxiHail. In the case of multiple subscribed companies in the destination city, the traveling passenger app will be able to query all available local TaxiHail companies to determine which has the closest vehicle. The booking is made with the local company but receipts and emails will be co-branded.

For those who want to take TaxiHail to the next level Mobile Knowledge offers additional modules which allow you to enhance the user experience for your passengers.

## Login with Facebook and Twitter

Offer your passengers the convenience of not having to remember yet another user name and password. With this option enabled, they simply click a button allowing them to login with either their existing Facebook or Twitter accounts. Simply sign up for development accounts with Facebook and Twitter and we'll do the rest!

## Kiosk Location Booking Software

An extension to your TaxiHail system, the custom branded Kiosk software is installed onto Android tablets supplied by you and enabled for the wireless provider of your choice. Ideally you would mount the tablets in locations accessible by a hotel concierge, bartender, doorman, etc.

The onsite user simply presses 1 button to request a taxi. They will then have the option to enter passenger details, monitor order status and cancel orders on the passengers behalf.
